Wing dihedral removed by cutting and bending the wings.

9g servos on each aileron 9g servo on elevator set into fuselage with a straight linkage to the tail. Elevator is straight cut and hinged and relief to the rudder for clearance

Motor is a 40mm EDF mounted to a 3D printed mount with a 30A esc with XT30 Connectors

Wires on extension leads and let into foam with a sharp blade.

Fuse hollowed out under wing for RX and ESC and cockpit holds a 3s 900mah lipo

Flying Notes :

Easy to hand launch, still in testing phase but needs a cone on the EDF for more thrust and more cooling
